Objective: To obtain a challenging, yet fulfilling position that allows for both personal and professional development while accomplishing company goals.

Education

South Dakota School of Mines & Technology
B.S. Mining Engineering & Management
Certificate Engineering Management and Leadership

Experience

Engineer with Central Plains Cement – Sugar Creek, MO - July '17 – Present

- Implemented a \$25,000 mine dewatering system
- Attended daily coordination and progress meetings
- Used AutoCad to map and monitor airflow, haul roads, and the progress of the underground mine
- Reviewed and reported daily production to ensure the mine was meeting safety and production goals
- Worked with various contractors to re-line a 700 foot \$30,000 water line from surface to the underground mine
- Monitored mining location and production in AutoCad to ensure monthly royalties were paid to landowners
- Conducted daily quality checks on the aggregate to be sure the rock was staying within the desired specifications
- Utilized ASPEN Process Explorer to monitor daily operations and ensure optimization
- Other duties included monitoring DPM and noise level testing, obtaining survey points for drillers, and coordinating with maintenance crews

*Field Construction Coordinator with **Blattner Energy**– Snyder, TX - February '17 – July '17*

- Worked on the installation of 2.3-MW wind towers
- Ensured all civil work done on site was up to company quality checks and followed the specifications outlined in scope of work and engineer drawings or blueprints
 - Civil work such as constructing site roads, excavation holes for tower bases, compaction requirements for crane pads, and reclamation of all disturbed areas
- Completed daily production and cost monitoring for major work items by ensuring production, cost data, and safety information are collected from prior day
- Reviewed daily cost and production reports
- Monitored daily production to ensure construction was in line with project schedule
- Prepared subcontractor progress payments and supplier purchase orders utilizing Textura payment process
- Responsible for the project equipment and material transactions and the monitoring of inventory of equipment, small tools and materials
- Ensured scope of work documents were understood during the construction phase
- Worked with RFI's, change orders, as built, and construction quality documents on a daily basis
- Conducted project kick-off and close out activities according to company procedures
- Attended and conducted daily coordination and progress meetings
- Completed job books with pertinent information about the towers as outlined in the customers' scope of work requirements

*Engineer Intern with **Central Plains Cement** – Kansas City, MO - May '16 – August '16*

- Completed ventilation study of airflow in underground mine
- Operated various mine equipment – haul truck, loader, fork lift, skidsteer, and excavator
- Inspected and performed weekly routine maintenance on shafts, conveyors, ventilation fans, and pumps. Other duties included surveying, calculating yields, and coordinating with blast crews
- Obtained data points for monthly revisions of mine map to help maintain structural integrity of underground mine

*Engineer Intern with **Lafarge-Holcim** - Marblehead, OH – May '15 – August '15*

- Collected and submitted applicable data as part of their environmental re-certification for Wildlife at Work and Corporate Lands for Learning
- Calculated, mapped, and marked in the field stripping of vegetation and topsoil for the next two years

*Engineer Co-op with **The Mosaic Company** – Bowling Green, FL – January '15 – May '15*

- Created bid packages for contractors on designing water flow control systems
- Lead reliability project on maintenance strategy around various equipment such as flotation cells
- Tested new columns installed in order to improve productivity in the flotation plant
- Completed optimization flow testing on multiple process pumps

*Project Engineer Intern with **3M** – Little Rock, AR - May '14-August '14*

- Completed a cost analysis of implementing an in-pit crushing and conveying system
 - Included a design and PFD of in pit crushing and conveying system
- Responsible for final installation process of a water cooling tower for water going off site
- Assisted in the redesign and construction of 55 ton storage bins
- Designed concrete slab for waste water treatment plant

Additional Information

- Proficient in Microsoft Office products
- Knowledge of Vulcan, AutoCad, Aspen Process Explorer, SolidWorks, Visio, and AggFlow software
- Detail oriented with excellent organizational, time management, and communication skills
