

Ujwala R.

Objective

6+ Years of Experience LTE, CDMA, EVDO and UMTS in Seeking for a position within Wireless RF Engineering, where my experience, education and positive proactive attitude contribute to achieving team goals.

Education

Bachelor of Technology in Electronics and Communications Engineering (2010).

GPA: 3.8/4.0

JNT University, Hyderabad, India

Professional Work Experience

Skill set: Experience designing, implementing and Model tuning using tools such as PLANET Ev, ATOLL, GeoPlan, TEMS Investigation Tool, and ACTIX Analyzer.

**RF Design Engineer,
AT&T, Baltimore, WABA Market**

Sep 2017 – Present

Responsibilities:

- Generate RF Data sheet (RFDS) for site implementation and construction using Autoforms. Quality Control and Maintenance of RF Data sheet (RFDS) repository for site implementation and construction, for the project, via consistent coordination with the customer RF lead.
- Collect all the design required data including market site database, geographical information, design assumptions, service expectation, antenna type, regulatory data. Ensure the designs meet AT&T specifications. Reviewed Site configuration and planned antenna position, direction, tilt etc.
- RF planning for LTE Ericsson design configuration like **CIQ, RFDS** and Port Matrix.
- Analyzed RAN traffic data for optimal site configuration to improve the key indexes and performance indicators(KPI).
- Ran predictions in ATOLL to create LTE Design KPI's and performed Monte **Carlo** Simulations to generate load based and other KPIs such as **RSRQ, RSRP, and SINR**.
- Planned new coverage & capacity sites using Atoll and Clutter Analysis.
- Verified LTE parameters and validated them in Atoll.
- Analyzed coverage plots to identify coverage holes and create search rings.

**RF Engineer
iDatalytics Inc, San Diego**

Feb 2016- July 2017

- Monitored Alcatel-Lucent network performance counters and KPI's to identify which network elements we're producing market-level affecting degradations.
- Provided detailed LTE market performance reports for multiple markets including San Diego, Orange County, and LA. Reports included the root cause analysis and corresponding resolutions provided for the weekly top offenders for Accessibility, Retainability, and Mobility in preparation for Market Acceptance.
- Made recommendations to resolve highly degraded LTE and CDMA cells.
- Used eDat to analyze LTE drive test data to reduce connection drop rates and connection failure rates.
- Relayed hardware alarms to field operations to resolve hardware faults.
- Supported national 3G product reliability studies in a UNIX environment, to determine alarm triggers for performance degradations, in coordination with the development team.
- Performed a preliminary analysis of Top Offending sector performance including site configurations, backhaul configurations, analyzing alarms, and asserts by logging into on SAM, NPO, and various other platforms / network elements.
- Analyzing failures scenarios such as Pilot Pollution, Missing Neighbor, and Overshooting Sites etc.
- Analyze the data for performance metrics such as RSRP, SINR, UL/DL throughputs, Sector swap, Intra/Inter HO failures etc.

AT&T, Atlanta GA.

RF Design Engineer

Jan 2013 –Dec 2015

- Conducted Technical Site Surveys (TSS) of planned new sites.
- Generated frequency plan and neighbor plan of new sites to be integrated.
- Executed network parametric audit & initial tuning of new on-Air sites.
- Conducted regular analysis of BSC/Cell level statistics, sorting out tail cells w.r.t. different KPIs, investigating and coming forth with solutions for their improvements.
- Prepare **RFDS** Sheet for LTE.
- OSS Parameters consistency checks: site commissioning files, Cells Info, loaded License for 2G and 3G, E911 info, TRS, MHA, ALD and RET settings, External alarms, Check pre-launched statistics.
- Site visit acceptance and Inventory check: Perform site visit to verify if the site is built according to the final RFDS, verify Antennas system installation and RET Cabling.
- Perform UMTS site walk and build RFDS for candidate approval, RFCIQ, CDD, Justification packages. **RF propagation** simulation in Asset for different antenna types, and Monte Carlo Simulation for different technologies and physical parameters settings and cables; create hearing packages for the client.
- Responsible for creating new RFDS sheets for modernization project and suggesting the required solution about the antennas and module of site.
- Managed network rollout in responsibility areas, involved in new sites integration & troubleshooted radio related issues of new on-Air sites.

GWS Wireless Inc, Dulles VA

Jr. RF Engineer

Oct 2011-Jan 2013

- Improving LTE and UMTS KPI like CDR, CFR and analyzing coverage issues.
- Generate status reports and track submission of deliverables.
- Perform neighbor optimization activities for network performance improvement.
- Create thematic maps.
- Work with Ericson team for packet core related issues.
- Recommended changes in UMTS clusters and improve KPI.
- Perform IRAT testing between WCDMA to LTE and vice versa.
- Perform network changes based on drive data analysis.
- Evaluated candidate site by comparing coverage, quality and dominance at different available candidate sites and presented the analysis.
- Executed network parametric audit &; initial tuning of new on-Air sites.
- Undertake neighbor optimization activities for network performance improvement (KPIs) and optimization tasks.
- Provided suggestions to the engineers in analyzing and understanding KPI degradation in their market from LTE and UMTS side.
- Managed network rollout in responsibility areas, involved in new sites integration & troubleshooted radio related issues of new on-Air sites.
