SYNOPSIS

Motivated individual seeking a challenging full-time opportunity that would facilitate the maximum utilization of my skills and expertise in making a positive difference to the organization

EDUCATION

The University of Texas at Tyler, TX

(May 2018)

Master of Science in Electrical Engineering, GPA – 3.75/4

WORK EXPERIENCE

Device Validation Engineer at Samsung Electronics America US, San Diego, CA

(Jan 2019- Present)

- Performance analysis of latest Samsung flagship devices per Carrier, Model, RAT, SW Version & Feature support
- Finalize requirements for 'Modem Certification' for all 4 major US Carriers based on Carrier specific TOL
- Hands-on use of test equipment from multiple vendors including R&S, ANITE, ANRITSU & SPIRENT for testing and debugging
- Implement procedures for regression testing and validation of AP & Modem Binary Systems
- SME support for Call Flow analysis of failure scenarios using tools like QXDM, QCAT, Shannon and other Samsung Internal Tools

Systems Engineer at Charter Communications US, Denver, CO

(Aug 2018-Jan 2019)

- Work with cross-functional teams to implement and support company initiatives
- Responsible to participate in continuous design and deployment, documentation of supported delivery profiles
- Responsible for ingesting content in Linux/Unix environments
- Responsible for maintaining Video Delivery Systems
- Knowledge on Gemini VOD CDN implementation using Hitachi Quanta Servers
- Experience with network test equipment, such as Ixia (Ixload), Spirent
- Worked on video quality optimization of digital video compression systems (MPEG-2, HLS)
- Involved in tracking, reporting and analyzing system defects and interacting with other team members to resolve technical issues
- Supporting engineering projects by active contribution to the application of engineering techniques; conducting tests and inspections
- Integrated Digital Rapids through Transcode Manager, Encoders and Remote Media Processor (RMP) in Charter lab environment
- Captured and analyzed the logs of Wireshark during blueprint run of Transcode Manager

Video Engineering Coordinator Intern at Charter Communications US, Denver, CO

(June 2018-Aug 2018)

- Work with Advanced Engineering team to support implementation solutions within Charter Corporate labs
- Attend meetings with Architecture and Engineering teams to understand platform and Video Systems environments
- Deployed and orchestrated the applications with Kubernetes
- Implemented testing environments for Kubernetes
- Documented the process and steps required to spin whole new environment for deploying applications in Kubernetes
- Knowledge on video encoding, transcoding systems, Video On Demand and Packaging.
- Support file transfers for ingesting content in Linux/Unix environments (Pre-Staging and Staging); verify content ingested correctly into required systems
- Knowledge on DPoE Network, DOCSIS/DPoE device initialization procedures, Packet flow through the DPoE device, Configuration file structure and content, Provisioning Ethernet Services on DPoE/DOCSIS
- Knowledge on Passive Optical Network Technologies (GPON, EPON, RFoG)
- Responsible to execute Legacy – TWC OLT (Optical Line Terminal) and ONU (Optical Network Unit) test plans
- Knowledge on cBR-8, UBR10K CMTS
- Experience with JAMA and Test Trail software's
- Experience with Waterfall and Agile product lifecycle development products
- Tools/Equipment: Adtran 9504N OLT , Nokia XE-040G-A ONU, Adtran C1004 ONU, MFVP-Ericsson, Gitlab, Chalk, JAMA Software, Test Trial Software, DRUM

Graduate Assistant at Campus Computing Services, Tyler, TX

(Sep 2016-May 2018)

- Handled the tasks of troubleshooting network issues and escalate problem to higher level of support, when required
- Responsible for Software Security – Accessing IT network and updating security programs as a part of security procedure
- Responsible for updating technical training materials for installation and configuration activities
- Monitor service queue for emerging service incidents and provide expert assistance as per priority

Software Engineer at Tagit Pvt.Ltd, Chennai, India

(Dec 2014 – July 2016)

- Coordinated with programmers to design, code and to obtain essential business specific requirements
- Designed validation programs for Android, iPhone and web applications
- Contributed to the development of client side and server-side codes for Android and iPhone applications
- Knowledge on Simple Object Access Protocol (SOAP) & Representational State Transfer (REST) APIs
- Created SQL queries and generated custom reports for login and transaction failures to monitor web-service performance
- Assisted with Application deployments for all environments (development, Test and Production) to JBOSS Application Server in both Windows and Linux environments
- Responsible for defect fixing, patching and software releases to client test environments and Servers using VPNs
- Analyzed software requirement based on user needs, capabilities and features in order to determine design feasibility
- Responsible for preparing release notes for QA, UAT and production environments
- Responsible for monitoring App performance to ensure specifications were met from client and server side
- Good experience with Agile development methodology and product cycles

In-Plant Trainee at Bharat Sanchar Nigam Ltd (BSNL), Hyderabad, India

(May2012– June 2012)

- Analyzed network capacity and device usage for Fiber optic Technologies including Wireless Communication and WiMAX
- Analyzed network design and architecture for GSM and UMTS technologies
- Site visits to gain knowledge on hardware implementation
- Knowledge on troubleshooting node inter-connectivity in CPE integration Lab

CERTIFICATIONS

- Cisco Certified Network Associate (CSCO13137160)
- Certified *Optical Fiber Engineer* from Bharat Sanchar Nigam Limited (BSNL)

PROJECTS

- ***Performance Analysis of MIMO systems with spatial Multiplexing in the presence of polarization diversity***
To study and simulate the behavior of MIMO systems under several channel conditions and coding schemes
- ***Dissertation Titled ‘Adhoc Routing Based Data Collection Application in Wireless Sensor Networks’***
The main aim of the project is to gather information by finding the route with the minimum number of hops to reach the destination and generate low message traffic by not encouraging the duplicate message within the network
- ***Study of Interface Operations between computers and internet using Wireshark***
To study and analyze the performance of local network and protocols

SKILLS

Technologies: 5G, IoT, LTE, VOLTE, MIMO, Carrier Aggregation, WCDMA, GSM

Protocols: IPV4, IPV6, TCP, UDP, RRC

Languages: C, Java, ORACLE 11g, Mysql, Python, Assembly Language 8085, STM32F407VGT6 MCU, MIPS

Software Tools: MapInfo Pro, Excel Macros, SSH, VPN Client, WinSCP, SVN, MatLab, Wireshark, Packet Tracer, VHDL, Keil Uvision, MultiSIM, MARS, Eclipse, JIRA, ServiceNow, Ixia, DRUM, Spirent, TCL
